INDIVIDUAL CATALOG **06**
from D&C CATALOG 20th Edition

01 02 03 04 05 **06** 07 08 09 10 11 12

The Twin Breakers have advanced to an entirely new stage.

Conforming to IEC & local Standards

Conforming to certifications and standards in major world markets
Expanded frame sizes in G-TWIN Global Series

G-TWIN Standard series MCCB

G-TWIN Global series MCCB

Compact & High performance

Compact models with unified dimensions meeting UL489 480V and IEC 440V requirements

GLOBAL TWIN History

1990 TWIN Breaker

1992 Super TWIN

1995 Super 60

2001 α-TWIN

2006 G-TWIN

FUJI MCCB and ELCB GLOBAL TWIN

Ecology

- Lower environmental impact
- Advanced green engineering and energy-saving support
- Conforming to the RoHS Directive

Usefulness

Leading the way in user-friendliness

Fuji Electric launched the Twin Breaker Series to world markets in 1990, in which molded case circuit breaker (MCCB) and earth leakage circuit breaker (ELCB) types were unified in external dimensions for the first time in the world. The Twin Breaker Series was highly evaluated and gained strong support, and the concept of Twin Breakers was established as Japan's de facto standards for MCCBs and ELCBs.

In 1992, Fuji Electric released the Super Twin Breaker Series, which enabled user installation of internal accessories for the first time in Japan.

In 1995, Fuji Electric released the Super 60 Series and advanced modularization via uniform external dimensions. In 2001, Fuji Electric launched the α-Twin Series to further advance the miniaturization and modularization of economic types with 100A frame or less as Japan's first multi-standard circuit breakers satisfying domestic and international standards. Since then, Fuji Electric has been making further product improvements by predicting market trends.

In recent years, market globalization has increasingly accelerated. At the end of 2004, the Japanese Industrial Standards (JIS) were aligned with the IEC standards, and the globalization in this field has been further accelerated.

Based on the Twin Breaker Series, Fuji Electric has expanded the range of its products conforming to and approved by international standards for global markets, always advanced the innovative development of fundamental technologies in response to the market demand, and developed the G-TWIN Series of MCCBs and ELCBs.

GLOBAL-TWIN

Conforming to IEC & local Standards

The G-TWIN series is a global breaker series that satisfies all major standards.

CE marking (TÜV) + CCC approved + JIS

Technical innovation

Arc and gas flow control technology
Effect of "ablation breaking technology"

Decrease
by
30%!

Narrow slit resin

- Increased arc voltage due to narrow slit effect
- Increased arc voltage and high-speed moving contact opening by ablation effect
- Suppression of internal pressure rise by adjusting the narrow slit width

Moving contact cover

- Arcing prevention at the bottom of moving contact

Magnetic yoke arrangement

- An increase in the repulsion force of the moving contact at initiation of contact opening

Ecology

Advanced environmental technology Conforming to the RoHS Directive

The G-TWIN Series is designed to lower environmental impact.

Recycling

- For easier recycling, all major parts are marked with the names of the materials used.

Conforming to the RoHS Directive

- Lead-free (Pb-free) solder is used.
- Free of hexavalent chromium (Cr⁶⁺-free) (125 to 800AF)

Cadmium-free contact material

Usefulness Leading the way in user-friendliness

Unifying and reducing the types of internal accessories

Molded Case Circuit Breakers

G-TWIN series

Quick reference guide

Motor protection breakers

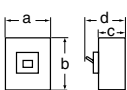

Motors are normally controlled by MCCBs and magnetic starters. In this case the MCCB carries out overcurrent or short-circuit current protection while the starter deals with ON-OFF switching

of the motor and offers protection against sustained overload currents. These are the motor breakers which combine the two functions.

FUJI motor breakers are designed to

eliminate erroneous operations due to the rush current produced at the time of starting the motor. They will trip in the face of sustained overcurrent when the integrated bimetal relay has operated.

G-TWIN series

Mounting modifications

■ Mounting modifications

• Standard series

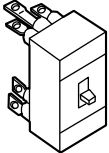

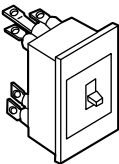

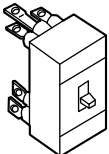

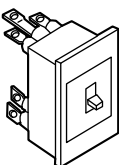

Standard type FUJI breakers are front mounting with front connections. The standard breaker can easily be modified to become front mounting rear connection type, flush mounting type and plug-in type. The additional parts such as insulation bases, barriers, covers and similar parts are added as required.

**Front mounting

Molded Case Circuit Breakers

G-TWIN series

Wire size and terminal

■ Notes on wiring (global series)

Notes on connecting wires (conductors)

- Connect wires to the UL breaker according to NEC (National Electric Code) or CEC (Canadian Electrical Code) Part 1.
- Use 75°C copper wires for wiring. UL-certified or CSA-certified wires are recommended.
- If a large current (for example, a short-circuit current) flows, it causes a huge electromagnetic force between wires. Therefore, be sure to secure the wires sufficiently.
- Re-tighten terminal screws periodically.

Block terminal connection

- Choose from the stranded wires shown in Table.

Wire size: AWG or MCM [mm ²]	No. of wires stranded
14 to 2 [2.1 to 33.6]	7
1 to 4/0 [42.4 to 107.2]	19
250 to 500 [127 to 250]	37

Values in [] are those converted from AWG or MCM sizes to mm².

- * See the instruction manual that comes with the breaker for more details.

Code	Terminal position		Applicable breaker type		
	Line	Load	BW50	BW100, 125, 250	BW400, 630, 800
Blank	Screw	Screw	●	●	—
Blank	Flat terminal	Flat terminal	—	—	●
SB	Block terminal	Block terminal	●	●	●
SF	Flat terminal	Flat terminal	●	●	—
S3	Screw	Flat terminal	●	●	—
S4	Flat terminal	Screw	●	●	—
S5	Screw	Block terminal	—	●	—
S6	Block terminal	Screw	—	●	—
S7	Flat terminal	Block terminal	—	●	●
S8	Block terminal	Flat terminal	—	●	●

Precautions

- Two wires of different sizes cannot be connected to the same block terminal.
- Be sure to use stranded wires according to Table "Number of wires stranded."
- Multi-conductor wires cannot be connected.
- Do not solder wires together.

Auxiliary switch (Type W)

This switch is used for indicator lamp or control circuit.
 See page 06/69.

Alarm switch (Type K)

This switch can be connected to a warning lamp or buzzer to indicate when the breaker has been tripped.
 See page 06/69.

Shunt trip device (Type F)

The purpose of this accessory is to trip the breaker from a distance.
 See page 06/70.

Undervoltage trip device (Type R)

The device is designed to protect circuits from harmful voltage drops. It can also be used for remote control purposes. The trip operates when the voltage drops to less than 70% of nominal coil rating, and the breaker cannot be reset until the voltage recovers 85% of its normal rating.
 See page 06/70.

Terminal block (Type A)

A wiring terminal for internal accessories
 (Order with W, K or F)
 See page 06/71.

Accessories

■ Variation of internal accessory

• 125 to 250AF

Auxiliary switch (Type W)

This switch is used for indicator lamp or control circuit.
See page 06/69.

Alarm switch (Type K)

This switch can be connected to a warning lamp or buzzer to indicate when the breaker has been tripped.
See page 06/69.

Shunt trip device (Type F)

The purpose of this accessory is to trip the breaker from a distance.
See page 06/70.

Undervoltage trip device (Type R)

The device is designed to protect circuits from harmful voltage drops. It can also be used for remote control purposes. The trip operates when the voltage drops to less than 70% of nominal coil rating, and the breaker cannot be reset until the voltage recovers 85% of its normal rating.
See page 06/70.

Terminal block (Type A)

A wiring terminal for internal accessories (Factory-mounted)
See page 06/71.

■ Variation of internal accessory
 • 400 to 800AF

Alarm switch (Type K)

This switch can be connected to a warning lamp or buzzer to indicate when the breaker has been tripped. See page 06/69.

Shunt trip device (Type F)

The purpose of this accessory is to trip the breaker from a distance. See page 06/70.

Terminal block (Type A)

A wiring terminal for internal accessories (Factory-mounted)
 See page 06/71.

Auxiliary switch (Type W)

This switch is used for indicator lamp or control circuit. See page 06/69.

Undervoltage trip device (Type R)

The device is designed to protect circuits from harmful voltage drops. It can also be used for remote control purposes. The trip operates when the voltage drops to less than 70% of nominal coil rating, and the breaker cannot be reset until the voltage recovers 85% of its normal rating. See page 06/70.

		200-240	3	200-220	3	RAC200-240V/DC200-220V
		277	3	–	–	RAC277V

Notes: • The operating voltages of undervoltage tripping devices are as follows:

Tripping voltage: 35% to 70% of rated voltage, closing voltage: 85% to 110% of rated voltage.

*1 Reset-allowed type: When the breaker handle is in the OFF or RESET state, tripping does not occur even if the R coil is not energized. Turning ON with the R coil not energized causes normal tripping.

*2 Reset-prohibited type: When the R coil is not energized, reset operation cannot reset the tripped breaker to the OFF state.

Mechanical interlocking devices

■ Description

These interlocking devices are mounted on the two separate breakers to prevent them from both being closed at the same time. A sliding mechanism that can be locked with a padlock is used. (The padlock is not included.)

They are designed for use when changing over power supplies.

These can be mounted to 3 types of breakers: front-mounting front-connection type, front-mounting rear-connection type (type X), and plug-in mounting type (type P). Interlock devices for flush mounting type breakers (type E, Y) are also available.

External operating handles

■ **Description**

Molded case circuit breaker handles are generally directly manual-operated but when mounted in motor control centers or on control panels they are sometimes required to be operated externally. To meet such applications FUJI offers the following three types of handles.

N type handle

This type has a knob handle directly attached to the breaker. It is easily fitted by cutting a hole in the panel, which is provided with a door interlock. They may be fitted to all breakers up to 800 ampere frame sizes. Conformed to EN60947-1 isolation function. Available for EN60204-1 power breaking device. Conformed to UL489 (File No.E93289)

V type handle

The V type handle may be fitted to breakers of up to 800AF. A separately sold extension shaft provides distance adjustment between the handle and breaker. Conformed to EN60947-1 isolation function. Available for EN60204-1 power breaking device. Conformed to UL489 (File No.E93289)

F type handle

The F type handle may be fitted to breakers of 125 to 400AF. It is a flange type handle, which is commonly used in the North American market. The drive section of the breaker and the external operating handle are connected with an optional cable. Positioning between the breaker and the external operating handle is not required. Conformed to UL489 (File No.E93289)

Steel enclosures

■ Description

Steel enclosures are available in three types — two with V-type handle which allows the operation from the outside and other with the operating handle of the breaker extending from it to allow it to be directly switched ON or OFF from outside the enclosure.

Enclosures with V-type handles are provided with a door interlocking mechanism which prevents the door from being opened in the ON condition.

Knockout holes for wiring use are provided as shown in the diagram.

Notes: • A gray-white terminal cover comes standard with the Global Series 125AF and 250AF.

*1 When using the external operating handle, part of the terminal cover () must be cut away.

*2 Crimp terminals for 325 mm² are not available.

*3 This type of cover can be mounted on the 400AF when flat terminals are not used.

Molded Case Circuit Breakers

G-TWIN series

External accessories

Insulation barriers

■ Description

The interphase barriers are provided on frame size of 32AF to 800AF breakers for front mounting. The barriers are installed in the molded slots between terminals.

The earth barrier is used to increase the insulation with the mounting plate surface when two crimp terminals are wired. Installation of these barriers after wiring is possible even when an external accessory is installed.

Padlocking device and handle locking cover

■ **Description**

• **Padlocking device**

These padlocking device lock the Breaker handle in the OFF position. Use a commercially available padlock with a shackle diameter of 3.5 to 5mm (5mm for the BZ6L10CA).

• **Handle locking covers (Order Separately)**

These simple handle locking covers can be easily installed by the user. Tripping is possible while the Breaker is locked ON.

Molded Case Circuit Breakers

BW0 series

General information

■ Description

We've expanded our MCCB lineup with the addition of models with global frame sizes of 160AF and 250AF.

• Compact

We've reduced external dimensions and increased modularization to the limits. Customers can now reduce costs in panel design and manufacturing. We've applied high-performance technology to achieve 100AF to 250AF models with a uniform depth of 60 mm. The size of the MCCB of 250AF has been significantly reduced.

Compact design has been realized for the MCCB family series from 100AF to 250AF. We've achieved a I_{cs} of 50% I_{cu} . Using uniform external dimensions provides flexibility in responding to changes in specifications. 100AF models can be mounted on IEC 35mm rail for easy panel mounting.

• Cassette

User installation provides for speedy on-site response to changes in specifications. All accessories can be assembled by the user. Quickly adaptable to the many onsite changes in specifications.

• Global

The BW0 series complies with the IEC standards in pursuit of global standards. The newly introduced frame sizes 160AF and 250AF fully comply with IEC standards while providing the required safety. The BW0 series complies IEC 60947-2. Standards conformity information is given on the nameplate. Gray front case has been adopted.

Molded Case Circuit Breakers

BW0 series

Terminal connection

■ Terminal Connection/Front mounting, Front Connection

- MCCBs and cables according to the screw size and tightening torque as shown in the table below.
- To facilitate the connecting work, the following parts are prepared.

Flat terminal and block terminal: See page 06/108

Frame	MCCB type	Screw and Bolt	Size (mm)	Tightening torque [N·m]
100A	BW103E0 BW102S0, BW103S0	Pan-head screw 	Rated current: 15 to 50A M5 13.5	2
			Rated current: 60 to 100A M8 13.5	5.5
160A	BW162E0, BW163E0 BW162J0, BW163J0 BW162S0, BW163S0	 Hexagonal socket head bolt	M8 16	8-13
250A	BW252E0, BW253E0 BW252J0, BW253J0 BW252S0, BW253S0

BW0 series

Internal accessories

Internal accessories

The number of tasks can be greatly reduced as all the internal accessories are cassette-type user-installed.

■ Auxiliary switch and alarm switch

These devices indicate the MCCB's operation status electrically.

Auxiliary switch (AUX) indicates the ON/OFF status of MCCB. Alarm switch (AL) indicates the trip status of MCCB. An MCCB trips when an overload occurs or a short-circuit current flows through the MCCB. Both the auxiliary switch and alarm switch can be installed either on the right or left side of MCCB body.

All auxiliary switches (AUX) and alarm switches (AL) are electrically pre-wired with wires of 1 mm², 500 mm long. The auxiliary switch, alarm switch and auxiliary plus alarm switch have almost the same appearance.

Combination of MCCB

Frame	MCCB Type		Type		
			Auxiliary switch (AUX)	Alarm switch (AL)	Auxiliary switch + alarm switch (AUX+AL)
100A	BW103E0	BW102S0, BW103S0	BW9W1SB0	BW9K1SB0	BW9WKS0
160A	BW162E0, BW163E0	BW162J0, BW163J0 BW162S0, BW163S0	BW9W1SG0	BW9K1SG0	BW9WKS0
250A	BW252E0, BW253E0	BW252J0, BW253J0 BW252S0, BW253S0			

■ Rating of auxiliary switches (AUX) and alarm switches (AL)

Type number	AC			DC			Mini. load current
	Voltage (V)	Make/Break current (A)		Voltage (V)	Make/Break current (A)		
		AC12	AC15		DC12	DC14	
BW9W1SB0	24	5	5	24	4	3	5V DC 160mA 30V DC 30mA
BW9K1SB0	48	5	5	48	2.5	1	
BW9WKS0	125	5	3	125	0.4	0.4	
	250	3	2	250	0.2	0.2	
BW9W1SG0	24	5	5	24	4	3	
BW9K1SG0	48	5	5	48	2.5	1	
BW9WKS0	125	5	3	125	0.4	0.4	
	250	3	2	250	0.2	0.2	

■ Operation of auxiliary switches(AUX) and alarm switches(AL)

Accessory	Handle position		
	ON	OFF	Trip
Auxiliary switch (AUX)			
Alarm switch (AL)			

■ **Shunt trip and undervoltage trip device**

Shunt trip (SHT) is a device that issues an electrical signal to trip the MCCB.

Undervoltage trip device (UVR) is a device that is used to trip the MCCB when the main circuit voltage drops lower than the specified value. Both the shunt trip and undervoltage trip device can be installed on the right side of MCCB body.

Shunt trip device (SHT)

■ **Combination of MCCB and shunt trip device**

Frame		Type	Operating voltage code	
100A	BW103E0 BW102S0, BW103S0	BW9FAB0	A	100-130V AC

Molded Case Circuit Breakers

BW0 series

Internal accessories

Shunt trip devices (SHT) are capable of internal mounting only.

Undervoltage trip device (UVR) for 100AF is capable of internal mounting only.

Undervoltage trip device (UVR) for 160AF and 250AF is capable of external mounting only.

■ Ratings of shunt trip (SHT)

Type	Power consumption		Time rating of coil	Operating time (ms)	Allowable voltage fluctuation
	AC VA	DC W			
BW9F□B0	30	30	Continuous	13 to 21	AC voltage: 85% to 110% of coil rated voltage DC voltage: 75% to 125% of coil rated voltage
BW9F□G0	30	35			

■ Ratings of undervoltage trip device (UVR)

Type	Coil rated voltage	Power consumption		Allowable voltage fluctuation
		AC VA	DC W	
BW9R□B0	110-130V AC	5	–	Tripping voltage: 70 to 35% of coil rated voltage Closing voltage: 85% to 110% of coil rated voltage
	200-240V AC	5	–	
	277V AC	5	–	
	380-415V AC	5	–	
	440-480V AC	5	–	
	24V DC	–	5	
	48V DC	–	5	
125V DC	–	5		
BW9R□G0	110-130V AC	200	–	
	200-240V AC	150	–	
	277V AC	150	–	
	380-415V AC	200	–	
	440-480V AC	200	–	
	24V DC	–	150	
	48V DC	–	150	
125V DC	–	300		

■ **Operating handle**

N type handle

The structure is that the handle operating mechanism is installed on the MCCB body.
 Attaching the dustproof packing ensures the degree of protection IP50 stipulated by IEC60529.
 Conforms to isolation stipulated by IEC60947-1.

V type handle

The structure is that the handle operating mechanism is installed on the door surface.
 The standard V type operating handle ensures the degree of protection IP54 stipulated by IEC60529.
 The space between the operating handle and the MCCB can be adjusted by using the extension shaft.
 The operating handle mechanism can interlock the switchboard door.
 Conforms to isolation stipulated by IEC60947-1.

■ **Combination of MCCB and operating handle**

Frame	MCCB type	N type handle	V type handle
100A	BW103E0 BW102S0, BW103S0	BW9N0B0	BW9V0B0
160A	BW162E0, BW163E0 BW162J0, BW163J0 BW162S0, BW163S0	BZ-N40C	BZ6V40C
250A	BW252E0, BW253E0 BW252J0, BW253J0 BW252S0, BW253S0	BZ-N40C	BZ6V40C

N type handle

V type handle

■ **Operating method**

- The ON, OFF, and RESET operation can be made for MCCB by rotating the handle. When the MCCB automatically interrupts the circuit, the handle indicates TRIP.
- By turning the RELEASE screw with a screwdriver, the door can be opened while the MCCB remained on.

- The handle can be locked OFF using a padlock. Use a commercially-available padlock. The shackle of the padlock should be max. $\phi 5\text{mm}$ for BW9N0B0, max. $\phi 8\text{mm}$ for BZ-N40C.

Molded Case Circuit Breakers

BW0 series

External accessories

External accessories

Terminal cover

Finger protection guards against shock from accidentally touching live terminals.

Long type

Short type

Frame	MCCB type	Long type	Short type	Packing quantity
100A	BW103E0 BW103S0	BW9BTB0-L3	–	2 pcs.
160A	BW162E0, BW163E0 BW162J0, BW163J0 BW162S0, BW163S0	BZ-TB40B	BZ-TS40B	
250A	BW252E0, BW253E0 BW252J0, BW253J0 BW252S0, BW253S0			

Insulation barrier Interphase

The interphase barrier reinforces the insulation between terminals. Two insulation barriers are supplied with the MCCB body. If additional insulation barriers are needed, please place an order with the following type number.

Frame	MCCB type	Type	Packing quantity
100A	BW103E0 BW102S0, BW103S0	BW9BPB0	2 pcs.
160A	BW162E0, BW163E0 BW162J0, BW163J0 BW162S0, BW163S0	BZ-B40B	4 pcs.
250A	BW252E0, BW253E0 BW252J0, BW253J0 BW252S0, BW253S0		

Flat terminal

This terminal facilitates connecting work. Additional flat terminals can be attached to 160 to 250A frames. Attach flat terminals according to the screw size and tightening torque as shown in the table below.

Pole	MCCB type	Type	MCCB side		Flat terminal side		Packing quantity
			Screw size	Torque	Screw size	Torque	
2	BW162E0 BW162J0 BW252E0 BW162S0 BW252J0 BW252S0	BZ-S50B-2252	M8 × 20	8-13N•m	M8 × 25	8-10N•m	4 pcs.

Block terminal

This connector screws directly to the standard connectors.

Frame	MCCB type	Rated current (A)	Wire size (mm ²)	Type	Packing quantity
100A	BW102S0	15 to 50	1.5 to 16	BW9SSL0B0-052	2 pcs.
		60 to 100	5.5 to 50	BW9SSL0B0-102	
	BW103E0 BW103S0	15 to 50	1.5 to 16	BW9SSL0B0-053	3 pcs.
		60 to 100	5.5 to 50	BW9SSL0B0-103	
160A	BW162E0, BW163E0 BW162J0, BW163J0 BW162S0, BW163S0	100 to 160	42.4 to 152	BW9SSL0G0(*)	
250A	BW252E0, BW253E0 BW252J0, BW253J0 BW252S0, BW253S0	175 to 250			

Note:(*) The Icu decreases to 50% when Block terminals are installed to the power supply side.

■ **External accessories**

• **Handle locking device**

This key lock device snaps on to the enable the handle to be locked in either the OFF position. It can be used either as a handle locking cover or, with the addition of a padlock, as an OFF lock.

Use a commercially-available padlock. The shackle of the padlock should 4 to 8mm diameter.

Frame	MCCB type	Type
100A	BW103E0 BW102S0, BW103S0	BW9Q1B0
160A	BW162E0, BW163E0 BW162J0, BW163J0 BW162S0, BW163S0	BW9Q1G0
250A	BW252E0, BW253E0 BW252J0, BW253J0 BW252S0, BW253S0	

• **IEC 35mm rail mounting adapter**

Unification of the external and basic dimensions has expanded the range of models mountable on IEC 35mm rails.

MCCB type	Type
BW103E0 BW102S0, BW103S0	BW9PDB0

Molded Case Circuit Breakers

H series

General information

H series

■ Description

- Models with high breaking capacities
- Line protection
: 15 to 800A
- Motor protection
: 16 to 45A
- Molded case color : Black

■ Type number nomenclature

■ Ordering information

Specify the following:

1. Type number
2. Optional accessories
Lead wire or terminal block connection
3. When ordering MCCB with shunt tripping device, undervoltage tripping device or motor operating mechanism, specify rated voltage and frequency.
4. Handle type if required

■ **Mounting modifications**

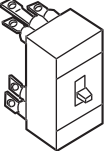

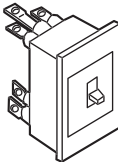

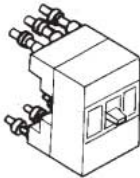

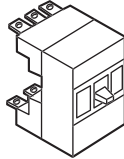

Standard type FUJI breakers are front mounting with front connections. The standard breaker can easily be modified to become front mounting rear connection type, flush mounting type and plug-in type. The additional parts such as insulation bases, barriers, covers and similar parts are added as required.

Standard type
Front mounting
Front connection

Mounting modification kits:
 See page 06/145

Variation of external accessory

Insulation barriers

The interphase barrier reinforces the insulation between terminals, while the earth barrier increases the insulation between the terminal and the mounting panel.
 See page 06/143

Earth barrier

Mechanical interlock device

The mechanical interlock device can be mounted onto two separate breakers to maintain a mutual ON or OFF condition. The device can also be locked with a padlock.
 See page 06/132

MCCB

Handle locking cover

External operating handles

There are two handles available in the series: the V type handle on panel mount and the N type handle on breaker mount. An extension shaft (sold separately) for the V type handle allows the distance between the handle and the breaker to be adjusted. The protective structure of the V type handle operation section conforms to IP54. Both handle types can be locked with a padlock conforming to IEC 60204-1. The panel cutout dimensions are the same for both handles.
 See page 06/133

N type

V type

Terminal covers

Finger protection guards against shock from accidentally touching live terminals. Two types of terminal covers are available—long type and short type.
 See page 06/143

Long type

Short type

Steel enclosures

Enclosures are available in three types—two with V-type handle which allows the operation from the outside, and other direct operating.

External operating handles

■ Description

Molded case circuit breaker handles are generally directly manual-operated but when mounted in motor control centers or on control panels they are sometimes required to be operated externally. To meet such applications FUJI offers the following three types of handles.

N type handle

This type has a knob handle directly attached to the breaker. It is easily fitted by cutting a hole in the panel, which is provided with a door interlock. They may be fitted to all breakers up to 800 ampere frame sizes.

V type handle

The V type handle may be fitted to breakers of up to 800AF. A separately sold extension shaft provides distance adjustment between the handle and breaker. Conformed to EN60947-1 isolation function. Available for EN60204-1 power breaking device.

N type handles BZ-N□C

V type handles BZ-V□C

N type handles

Molded Case Circuit Breakers

H series

External accessories

N type operating handles

■ Operating instructions

1. MCCB operation

- Close the door with the handle in the OFF position. Turn the handle to the ON position and the MCCB will be ON.
- Turn the handle to the OFF position and MCCB will be OFF.
- When the breaker trips, the handle moves to the TRIP position. To reset, move the handle to the RESET position.

2. Door locking

- The door cannot be opened when the handle is in the ON, OFF or TRIP position, and can be opened only when the handle is in the OPEN position.
- The breaker cannot be ON when the door is open.
- If it is necessary to open the door with the breaker closed, turn the door lock release screw counterclockwise using a screwdriver.

3. Handle locking

The handle can be locked in either the ON or OFF position when a padlock (not supplied) is used. Pull out the handle lock plate and fit your padlock to the lock plate. If the breaker trips while it is locked in the ON position, the handle moves to the TRIP position.

■ Installation

● BZ-N30C, BZ-N40C

1. Drilling and cutting the door

Drill and cut the door. The dimensions for drilling and cutting are the same whether the MCCB is installed horizontally or vertically.

2. Preparing a base plate (Fig. 1)

Prepare a base plate to adjust breaker mounting position (base plate: not supplied). Front mounting, front connection type breakers can only be suitable for this handle. Drill the breaker mounting holes on the base plate.

3. Fitting the N-handle mechanism and MCCB to the base plate (Fig. 1)

Commonly tighten the N-handle body and MCCB to the base plate with the mounting screws. For N30C, tighten two mounting screws on a diagonal line, and for N40C, tighten four mounting screws. Assemble the driving unit so that the breaker handle engages the N handle arm. (Fig. 4)

4. Mounting the decorative plate

Mount the decorative plate and the retaining plate to the door with screws provided. (Fig. 2)

Adjust the position of the handle unit so that it does not tilt against the breaker. (Fig. 3)

Fig. 1

Fig. 2

Door panel cutting

Door hinge installation area

Install the door hinge in the shaded area.

Breaker type	Handle type	A	Mounting Screw	Mass (kg)
H50BA, 100BA	BZ-N30C	103	M4 × 85	0.56

Breaker type	Handle type	A	Mounting Screw	Mass (kg)
H225BA	BZ-N40C	103	M4 × 85	0.56
H100R, H225R	BZ-N50C	142	M4 × 125	0.62

BZ-N60C, BZ-N70C (Dust proof packing: BZ-NP-2, optional)

Door panel cutting

Note: • Handle protection degree IP50 (IEC60529, JIS C 0920) (with the optional dust-proof packing)
• The handle cannot hold the door.

Door hinge installation area

Install the door hinge in the shaded area.

Notes:

- The N type handles are used with front mounting front connection type breakers. They are normally installed vertically. However, it is possible to install them horizontally if required. In this case please specify so in your order. (Example) Specify as follows:
BZ-N□C-R..... Installed horizontally, the line positioned on the right side.
BZ-N□C-L..... Installed horizontally, the line positioned on the left side.

- Breakers use different size screws for the P-type (Plug-in) breakers

Breaker type	Handle type	Mounting screw	Mass (kg)
H400R	BZ-N60C	M6 × 110	1.9
H600R, H800R	BZ-N70C	M6 × 110	1.9

V type operating handles, up to 225AF

■ **Operating instructions**

1. MCCB operation

- Close the door and turn the handle to the ON position and the breaker will be positioned at ON.
- When the breaker is interrupted automatically the handle will move to the TRIP position.
- To reset move the handle to the RESET position.

2. Door panel locking

- Turn the handle to the RESET position and the lock mechanism will be released thus allowing the door to be opened.
- The door cannot be opened when the breaker is positioned at ON.

3. Handle locking

The padlock can lock the handle in the OFF position.

- Locking MCCB with the door open : Fig.1
- Locking MCCB with the door closed : Fig.2

Pull out the lock plate and hook the padlock.

4. Interlock release

This type is provided with an interlock release screw. Turn this screw if it is necessary to open the door in the ON position. This release the lock and allows the door to be opened. When reclosing the door, make sure the handle of the breaker coincides with the position (ON or OFF) of the external handle position.

■ **Installation**

BZ-V20C to BZ-V50C

1. Drilling and cutting of the door panel

Drill and cut the door panel as shown in the drawing.

2. Mounting of the MCCB

The distance between the backside of the door panel and breaker mounting plate should be the dimension "H" shown in the drawing below.

H dimensions, mm (Fig.3)

- BZ-V30C: 105
- BZ-V40C: 105
- BZ-V50C: 144

3. Mounting the driving unit

- Set the breaker handle to the OFF position. Assemble the driving unit so that the breaker handle engages the V handle arm. (Fig.4)
- Secure the driving unit and breaker together to the mounting plate by tightening the four attached mounting screws. (Fig.5)

4. Mounting the handle unit

- Put the handle unit, cover holder, packing, and retainer in front of and behind the panel and tighten the screws temporarily as shown in Fig.6. Adjust the position of the handle unit so that it does not tilt against the breaker. (Fig.7)
- Put the handle of the handle unit in the OFF position and close the door. Check that the shaft engages the latch when the door closes. (Fig.8)

Notes:

- Handle protection degree IP54 (IEC60529, JIS C 0920)
- The handle cannot hold the door.

V type operating handles, 400AF to 800AF

■ **Operating instructions**

1. MCCB operation

- Close the door and turn the handle to the ON position and the MCCB will be positioned at ON.
- When the MCCB is interrupted automatically the handle will move to the TRIP position.
- To reset move the handle to the RESET position.

2. Door panel locking

- Turn the handle to the RESET position and the lock mechanism will be released thus allowing the door to be opened.
- The door cannot be opened when the breaker is positioned at ON.

3. Handle locking

The padlock can lock the handle in the OFF position.

- Locking MCCB with the door open: Fig. 1
- Locking MCCB with the door closed: Fig. 2

4. Interlock release

This type is provided with an interlock release screw. Turn this screw if it is necessary to open the door at the ON position. This releases the lock and allows the door to be opened. When reclosing the door, make sure the handle of the breaker coincides with the position (ON or OFF) of the external handle position.

■ **Installation**

BZ6V60C, V70C

1. Drilling and cutting of the door panel

Drill and cut the door panel as shown in the drawing.

2. Mounting of the MCCB

The distance between the backside of the door panel and MCCB mounting plate should be the dimension as shown in Fig.3.

3. Mounting the driving unit

- Set the MCCB handle to the OFF position. Assemble the driving unit so that the MCCB handle engages the V handle arm. (Fig. 4)
- Secure the driving unit and MCCB together to the mounting plate by tightening the four attached mounting screws. (Fig. 5)

4. Mounting the handle unit

- Put the handle unit, packing and retainer in front of and behind the door panel and tighten the screws temporarily as shown in Fig.6. Adjust the position of the handle unit so that it does not tilt against the MCCB. (Fig. 7)
- Put the handle of the handle unit at OFF position and check the latch engages the keeper and close the door while holding the handle unit cover by hand. Final tightening the screws should be performed as keep the engaging position. (Fig. 8)

- Breakers use different size screws for the X type (rear connection) or P-type (Pulg-in) breakers.

Pressed steel enclosures

■ **Description**

BZ-type enclosures are available in three types — with V-type handle which allows the operation from the outside and other with the operating handle of the breaker extending from it to allow it to be directly switched ON or OFF from outside the enclosure.

Enclosures with V-type handles are provided with a door interlocking mechanism which prevents the door from being opened in the ON condition.

Knockout holes for wiring use are provided as shown in the diagram.

Insulation barriers

■ Description

The interphase barriers are provided on frame size of 50AF to 800AF breakers for front mounting. The barriers are installed in the molded slots between terminals.

The earth barrier is used to increase the insulation with the mounting plate surface when two crimp terminals are wired. Installation of these barriers after wiring is possible even when an external accessory is installed.

H103R H203R	BZ-BL50B	190 (105, 147)	100 (50, 72)	2	48

Note: *2 The value in parentheses is the dimensions after the barrier is cut.

Earth barrier

Mounting modification kits

Standard type breakers are front mounting front connections. The standard breaker can easily be modified to become front mounting rear connection and flush mounting types by using the modification kits.

Modification kits

● For front mounting, front connection (Flat terminal)

Breaker type	Kit type	
	For 2-pole	For 3-pole
H50BA, 100BA	BZ-S35B-1002	BZ-S35B-1003
H225BA	BZ-S50B-2252	BZ-S50B-2253
H100R, 225R	–	BZ-S50B-2253

● For front mounting, rear connection (X type)

Breaker type	Kit type	
	For 2-pole	For 3-pole
H50BA, 100BA	BZ-X31C-1002	BZ-X30C-1003

Molded Case Circuit Breakers

Solid-state trip types

Description

Solid-state trip types, SA1000E, 1200E, 1600E

■ Description

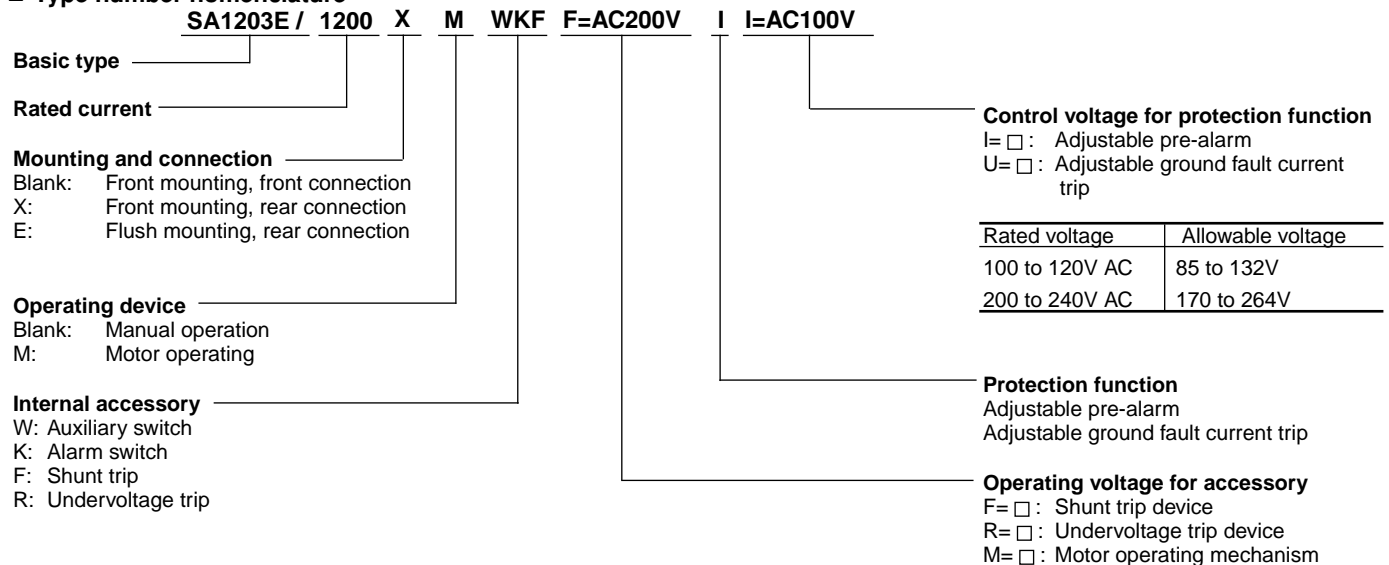

- **Equipped with a load current pre-trip alarm**
Constantly monitors the load current, and outputs an alarm when the set current is exceeded.
- **Adjustable rated current**
The rated current is easy to vary in 5 to 6 steps using an adjustment dial.
- **Wide-range-adjustable trip characteristics**
The current and time for instantaneous tripping and short-/long-time delay tripping can be set by the user.
- Adjustable ground fault tripping determinate and set a current level for ground fault detection in the ranging between 10% to 40% of the rated CT current.

Protection function

• Long-time delay tripping (Rated current adjustable)

• Adjustable instantaneous tripping

• Adjustable short-time delay tripping

Coordination with solid-state trip type MCCB

Coordination with thermal-magnetic trip type MCCB

• Adjustable pre-trip alarm

• Adjustable ground fault tripping

Molded Case Circuit Breakers

Solid-state trip types

Protection function

■ Pre-trip alarm function

Constantly monitors the load current, and outputs an alarm when it exceeds the set current. Helpful for preventive maintenance and power management. The pre-trip alarm operates via an LED on the breaker surface and a contact output. Separate power supply is necessary. The pre-trip alarm setting range allows adjustment to 70, 80, 90, or 100% of the rated current.

■ Multi protection function

Wide-range-adjustable trip characteristics with high precision. Either ground fault tripping or the pre-trip alarm can be selected as an option (not both).

• Pre-trip alarm characteristics

• Ground fault tripping characteristics

■ **Terminal Connection/Front mounting, Front Connection**

• MCCBs and cables according to the screw size and tightening torque as shown in the table below.

MCCB type	Screw and Bolt	Size [mm]	Tightening torque [N·m]
SA1003E, SA1004E SA1203E, SA1204E	 <p>Hexagonal head bolt</p>	M12 x 55	40.2 to 65.7

■ **Auxiliary switch and alarm switch**

These devices indicate the MCCB's operation status electrically.

- Auxiliary switch (W)
Auxiliary switch indicates the ON/OFF status of MCCB.
- Alarm switch (K)
Alarm switch indicates the trip status of MCCB. MCCB trips at the time when the following condition occurs:
 - Overcurrent
 - Short-circuit current

■ **Ratings of auxiliary switch (W) and alarm switch (K)**

• **Standard type**

AC			DC			Minimum load	
Voltage (V)	Current (A)		Voltage (V)	Current (A)			
	Resistive load	Inductive load		Resistive load	Inductive load		
480	3	2	250	0.3	0.3	30V DC	26.7mA
250	5	5	125	0.3	0.6	5V DC	160mA
125	5	5	30	5	4		

Note: Inductive load condition: Power factor 0.4 or more (AC), time constant 7ms or less (DC)

• **For low level circuit**

AC		DC		Minimum load	
Voltage (V)	Current (A)	Voltage (V)	Current (A)		
	Resistive load		Resistive load		
125	0.1	30	0.1	30V DC	1mA
				5V DC	1mA

Note 1: When ordering, specify WD, KD.

	ON	OFF	TRIP
Auxiliary switch (W)			
Alarm switch (K)			

Molded Case Circuit Breakers

Solid-state trip types

Internal accessories

■ Shunt trip (F) and undervoltage trip device (R)

• Shunt trip (F)

The purpose of the shunt trip device is to trip the MCCB remotely.

• Undervoltage trip device (R)

The undervoltage trip device trips the MCCB when the MCCB primary voltage is lower than the specified voltage.

• Ratings of shunt trip device (F)

Rated voltage	Coil energized current (A) *1	Allowable voltage fluctuation (V)	Maximum operating time (ms) *2
100-115V AC	1.1	85-126.5	30
200-480V AC	0.93	170-528	
24V DC	2.52	18-26.4	
48V DC	1.55	36-52.8	
100-115V DC	0.67	75-126.5	
200-230V DC	0.35	150-253	

Note *1: The current value at rated voltage maximum value (60Hz AC)

*2: The time period from when the rated voltage is applied to the shunt trip coil until the MCCB main contact opens.

• : The shunt trip device operation is short-time rating. To prevent the device from burning, continuous signal to the device should not be applied.

• Ratings of undervoltage trip device (R)

Rated voltage	Coil power consumption (VA)	Tripping voltage range (V)	Closing voltage (V)	Maximum applicable voltage (V)	Maximum operating time (ms) *2
100-120V AC	5 or more	70-20	85 or more	132 or less	30
200-240V AC		140-40	170 or more	264 or less	
380-450V AC		266-76	323 or more	495 or less	

Rated voltage	Coil energized current (A) *1	Tripping voltage range (V)	Closing voltage (V)	Maximum applicable voltage (V)	Maximum operating time (ms) *2
24V DC	22.7	16.8-4.8	20.4 or more	26.4 or less	30
100-115V DC	6.0	70-20	85 or more	126.5 or less	

Note *1: The current value at rated voltage maximum value

*2: The time period from when the rated voltage is applied to the shunt trip coil until the MCCB main contact opens.

• : When you turn on the tripped MCCB, perform the reset operation first and then turn ON the MCCB.

• Wiring diagram and terminal symbol

Type of accessory		Wiring diagram and terminal symbol
Shunt trip device	F	<p>With burn-out-preventive contact</p>
Undervoltage trip device	R	<p>With UVR controller</p> <p>Without UVR controller</p>

■ **UVR controller**

- When using AC type undervoltage trip device (R), be sure to use a UVR controller.
- UVR controllers are equipped with standard type MCCBs at factory shipment. Separately installed type controllers are also available.

• **UVR controller wiring diagram**

• **Installing position of UVR controller on MCCB and terminal arrangement**

Unit: mm			
Frame size	MCCB type	A	B
1000, 1200	SA1003E, SA1004E	114(138)	72
	SA1203E, SA1204E		
1600	SA1603E, SA1604E	114(138)	92

Notes: • Terminal screw tightening torque: M3.5 screw, 0.88-1.18N m
 • Applicable wire size 2.0mm² max.

• **UVR controller outline dimensions, mm**

*1: For separate installation, install an OCR controller together with the UVR controller

Molded Case Circuit Breakers

Solid-state trip types

External accessories

■ Variation of external accessory

1. External operating handle
Mounted on the control panel or switchboard to externally operate MCCB installed inside control panel or switchboard. The following 3 type handles are available.
 - Panel front mounted type (G type)
The external operating handle is mounted on the control pane or switchboard doors.
 - MCCB mounted type (N type)
This external operating handle is directly mounted to the MCCB installed inside the panels.
2. Auxiliary handle
Reduce the required force to turn ON/OFF/RESET the MCCB.
3. Terminal cover (TB)
Used to protect fingers touching live parts.
 - For front mounting MCCBs
4. Interphase barrier (B)
The interphase barrier reinforces the insulation between terminals to prevent accidents.
5. Handle padlocking device (L)
MCCB handles can be locked at either the ON or OFF position with this device. Prepare padlocks commercially available.
6. Lead-wire terminal block (A)
MCCB side mounted lead-wire terminal block.

■ **Operating handle (N type)**

- The N type operating handle is directly mounted on the MCCBs.

• **N type**

MCCB type	Type	Dust-proof packing
SA1003E, SA1004E SA1203E, SA1204E SA1603E, SA1604E	BZ6N101C	BZ-NPC

• **Operating method**

- The MCCB ON, OFF, and RESET operation can be made by turning the handle. When the MCCB trips, the handle moves to the TRIP position.
- If you turn the RELEASE screw with a screwdriver, the door can be opened while the MCCB is closed.
- The handle can be locked using a padlock to hold MCCB at either ON or OFF position. Prepare a commercially available padlock. Recommended padlock shackle size is $\phi 3.5-6\text{mm}$.

• **Dimensions, mm**

SA1603E, SA1604E	

• Operating method

- The MCCB ON, OFF, and RESET operation can be made by turning the handle. When the MCCB trips, the handle moves to the TRIP position.
- If you turn the RELEASE screw with a screwdriver, the door can be opened while the MCCB is closed.
- The handle can be locked using a padlock to hold MCCB at OFF position. Prepare a commercially available padlock. Recommended padlock shackle size is $\varnothing 8\text{mm}$.

• Dimensions, mm

Applicable MCCB type	A	B
SA1000E, SA1200E	199.4	3
SA1600E	219.4	

■ Ordering information

Specify the type number.

■ **Auxiliary handle**

- Reduce the required force to turn ON/OFF/RESET the MCCB.
- One auxiliary handle is supplied with one MCCB as standard.

Attaching and removing handle

Pull out the lock pins on both right and left sides in the direction of the arrows, and put the auxiliary handle onto the handle of the MCCB. The auxiliary handle is fixed with spring force. When removing, pull out the lock pins the same way in the direction of arrows and take off the auxiliary handle.

Applicable MCCB type	Type
SA1003E, SA1004E SA1203E, SA1203E SA1603E, SA1603E	Supplied as standard

■ **Handle padlocking device**

- When the handle padlocking device is locked, the MCCB handle can be locked in the OFF (open) position.
- Use the commercially available padlocks with shackle of diameter 4-8mm.

Applicable MCCB type	Type
SA1003E, SA1004E SA1203E, SA1203E SA1603E, SA1603E	BZ6L101C

06

Use of handle padlocking device

Put the handle padlocking device's lock lever at UNLOCK (lock release) position and attach the padlocking device to the MCCB handle. Once the lock lever is turned to the LOCK (locked) position, the MCCB handle ON (closed) operation and OFF (open) operation are prohibited. When using the MCCB with the handle being locked, lock with the padlock(s) in this state.

■ **Ordering information**

Specify the type number.

**Air circuit breakers
DH series**

■ **Description**

The newly designed DH series air circuit breakers have excellent features as follows:

- The height and depth dimensions are identical in all sizes up to 3200AF
- Increased accessibility from the front enhances easy of installation, operation and maintenance
- No extra arc space required, This will assist in minimizing switchboard height and costs
- Very fast interruption by double break system
- Selective trip protective coordination functions

■ **Selection guide**

Series		DH series	
Frame size		800, 1250, 1600, 2000, 2500, 3200, 4000, 5000, 6300	
No. of poles		3, 4	
Installation	Fixed	Available (Up to 3200AF)	
	Draw-out	Available	
Closing mechanism		Manual spring, motor spring	
Tripping mechanism		Shunt trip, undervoltage trip	
Overcurrent protection device	Characteristics	L-characteristic	Available
		R-characteristic	Available
	Protection function *	Long time delay	Available
		Short time delay	
		Instantaneous	
		Pre-trip alarm	Available
		Ground fault	Available
		Preverse power	Available
		N-phase protection	Available
Contact temp.monitoring	Available		

* Availability of protective function differs depending on the OCR type.

■ **Comparison of breaking capacity**

Rated current (A)			800A	1250A	1600A	2000A	2500A	3200A	4000A	5000A	6300A	
Rated breaking capacity (kA. sym.)/ Rated making current (kA. peak)	Rated voltage 690V AC	DH□	50/105				65/143		75/165	85/187		
		DH□H	55/121									
		DH□P	85/187									
Rated voltage 440V AC	Rated voltage 440V AC	DH□	65/143				85/187		100/220	120/264		
		DH□H	80/176									
		DH□P	100/230									

■ **Standards (Conform to the following standards)**

- Conforming to
 - IEC60947-2
 - EN60947-2
 - AS3947-2
 - NEMA PUB No. SG3
 - ANSI C37.13
 - JIS C 8201-2-1
 - JEC 160

Air Circuit Breakers

DH series

Features

■ Standardized basic dimensions

The height and depth dimensions are identical in all sizes to 3200A. There are four common widths or frame size, from 800-2000A, from 2500-3200A, 4000A and 5000-6300A for the standard series. The panel cutout size is the same for all types of DH series ACB, which makes it easy to arrange the ACBs in switchboards.

Maximum power from minimum volume was central to the design specification. With a depth of 290mm for the fixed type and 345mm for draw-out, it is one of the smallest ACBs in the world.

ACBs with front connections are available off-the-shelf.

Front connections are especially suitable for smaller-depth switchboards.

■ Geared toward the smallest depth in the world

Direct connection of the isolating main contacts to the hinges of the fixed main contacts eliminates the need for intermediate conductors. Allowing the DH series ACBs have the world's smallest depth resulting in space saving in switchboards.

More than twenty design patents have been registered for the DH series ACB.

■ Increased accessibility from the front

It enhances ease of installation, operation, and maintenance. The double insulated design ensures that most accessories can be safely and easily installed by the user. Control, auxiliary and position switch terminals are mounted at the front on the ACB body for easy access. Due to the increased level of harmonics within the distribution network, the neutral phase is fully rated as standard.

■ No extra arc space required, vertical stacking permitted

The DH series ACB dissipates all arc energy within its unique "Double Break" arc chamber.

The internal energy dissipation within the ACB allows the clearance distance of the ACB to nearby earthed metal to be zero. This will assist in minimizing switchboard height and costs.

Very fast interruption by "Double Break" system

The unique "Double Break" main contact system ensures extremely fast interruption of short-circuit currents and substantially reduces main contact wear. The internally symmetrical "Double Break" structure allows reverse power connection.

No clamp screws used for the main circuit contact units

There are no clamp screws or flexible leads in the main circuit contact units. This substantially enhances the durability of the main circuit contact units and improves the reliability in ON-OFF operation.

Enhanced selectivity

Fuji is so concerned about selectivity that all our protection relays have 'LSI' characteristics as standard.

This provides an adjustable time delay on overload (L) and also the I²t ramp characteristic (S).

As shown, these are essential to provide selectivity when grading with other protective devices such as downstream fuses and upstream relays.

The standard 'LSI' curve provides more than five million combinations of unique time current characteristics.

Zone selective interlocking is available to provide zero time delay selectivity.

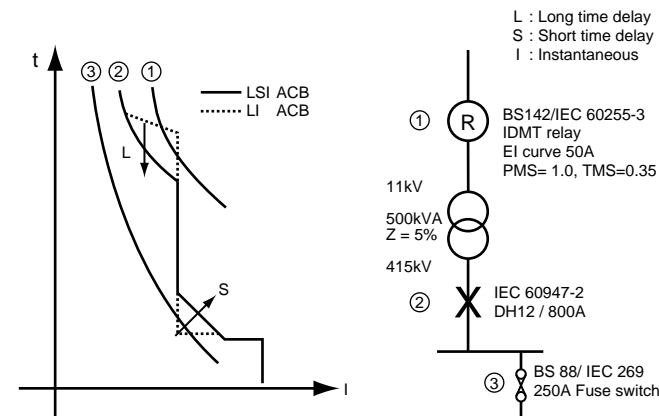

As the rated breaking capacity is identical to the rated short-time withstand current full selectivity can be achieved.

Replacement of the main contacts

The fixed and moving main contacts can easily be replaced in the field, thus prolonging the life on the circuit breaker. Changing each pole takes around 15 minutes.

06

Type and rated current		DH08 800A	DH12H 1250A	DH25 2500A	DH16P 1600A	DH40 4000A	DH50 5000A
		DH12 1250A	DH16H 1600A	DH30 3200A	DH20P 2000A		DH60 6300A
		DH16 1600A	DH20H 2000A		DH25P 2500A		
		DH20 2000A			DH30P 3200A		
Performance	Rated breaking current (at 400V AC)	65kA	80kA	85kA	100kA	100kA	120kA
	Rated short-time withstand current (for 1 sec.)						

Note: If the ACB is DH-H type or DH-P type without INST trip/MCR function, the rated breaking capacity will decrease down to the rated latching current.

Air Circuit Breakers

DH series

Features

■ DH series provides positive protection for electric power systems.

DH series is equipped with an RMS sensing over-current release (OCR) having a wide range of protection functions and capabilities.

■ Optimum protective coordination

Why use a separate panel mounted protection relay when you can have all the benefits of I.D.M.T. protection integral to the ACB?

Fuji ACB is available with a choice of flexible protection curves to assist in selectivity applications.

All these curves are user definable and comply with IEC 60255-3. Standard transformer and generator protection characteristics are also available.

AGR-L Industrial & transformer protection
 AGR-R Characteristics to IEC 60255-3
 AGR-S Generator protection

Inverse Definite Minimum Time (I.D.M.T.)
 (S.I. Standard Inverse)
 (V.I. Very Inverse)
 (E.I. Extremely Inverse)

■ Overload protection

Adjustable from 40-100% of rated current. True r.m.s detection up to the 19th harmonic, a distant vision for the competition who rarely see past the 7th. Neutral protection for all those Triple-N harmonics, such as 3rd, 9th and 15th. Also in case we forgot to mention, a "Thermal memory" as standard!

■ Two channel pre-trip alarm function (S-characteristic) *1

This function can be used to monitor and switch on additional power backup to feed critical circuits. For example, the function can be set so that when a pre-trip alarm is activated, an emergency generator starts to ensure a constant supply. This feature is only available on some AGR21 OCR models with a generator "S" characteristic.

■ N-phase protection function (optional)

In 3-phase, 4-wire systems that contain harmonic distortion, the 3rd harmonic may cause large currents to flow through the neutral conductor. The N-phase protection function prevents the neutral conductor from sustaining damage or burnout due to these large currents. Available in all OCRs except for generator "S" characteristic types.

■ Reverse power trip function (S-characteristic) *1 (The first-ever feature for ACBs)

This feature provides additional protection when paralleling generators. The AGR21 OCR for generator protection with the reverse power trip function, negates the need for installation and wiring in an external reverse power relay. This feature is available using an AGR21 OCR with a generator "S" type characteristic only.

■ Ground fault trip function

This function eliminates external relays to provide a ground fault protection to TN-C or TN-S power distribution systems on the load side. Ground fault protection on the line side is also available as an option.

■ Reverse phase protection function

This function detects the negative-phase current occurring due to reverse phase or phase loss and prevents burnout of a motor or damage to equipment.

■ Contact temperature monitoring function (optional) *2

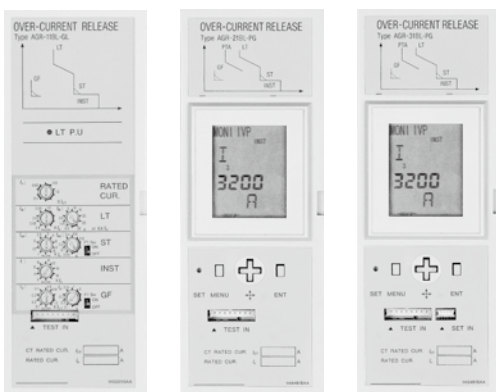

This function monitors the temperature of the ACBs main contacts. An alarm indicates when the temperature exceeds 155C. Continuous monitoring of the contact temperature provides valuable input for preventative and predictive maintenance programs.

■ Advanced L.C.D display, Over Current Relay

The AGR-31B OCR comes standard with an LCD display. It can monitor and indicate phase currents, voltages, power, energy, power factor, frequency, and more. For features, refer to page 06/185.

*1: Available for type AGR-22BS, 31BS.

*2: Available for type AGR-22B, 31B OCR.

Standard OCR with adjustment dial Type AGR-11B

Standard OCR with LCD Type AGR-21B, 22B

Enhanced OCR with LCD Type AGR-31B

• If the ACB is DH-H type or DH-P type without INST trip/MCR function, the rated breaking capacity will decrease down to the rated latching current.

Air Circuit Breakers DH series

■ Appearance

(Example of draw-out type equipped with full accessories)

■ Internal construction

■ Mounting

● Draw-out type

This type of ACB consists of a breaker body and a draw-out cradle. The breaker body can be moved within or removed from the draw-out cradle that is fixed in the switchboard. There are four breaker body positions: CONNECTED, TEST, ISOLATED, and DRAW-OUT. The switchboard panel door can be kept closed in the CONNECTED, TEST, and ISOLATED positions (“shut-in three positions”).

Note: On the position counter, an abbreviated form CONN is used instead of CONNECTED.

● Fixed type (standard series only)

This type of ACB has no draw-out cradle and is designed to be directly mounted in the switchboard.

■ Connection methods

● Main circuit terminals

Three(3) types of main circuit terminal arrangements are available: vertical terminals, horizontal terminals, and front connections. Different types of terminal arrangements can be specified for the line and load sides. Unless otherwise specified by the user, horizontal terminals are given to types DH08, DH12 and DH16 ACBs on both the line and load sides, and vertical terminals to DH20, DH25, DH30 and DH40. For DH40, only vertical terminals available. For High breaking series (H, P type), vertical terminals are standard and horizontal terminals are optional, and front connections are not available.

The breaker applicable maximum rated current derated depending on the connection method.

Horizontal terminals

Vertical terminals

Front terminals

● Control circuit terminals

Control circuit terminals are front located to allow easy wiring/access.

- The terminal blocks (for auxiliary switches, position switches, and control circuits) are positioned on the top of the ACB front panel and can be accessed from the front for wiring.

- M4 screw terminals are available.

Screw terminals

Air Circuit Breakers

DH series

■ Closing method

With DH series ACB, there are two kinds of closing methods; manual charging type and motor charging type.

● Manual charging type

With manual charging type DH series ACB, the closing springs are charged manually by means of the spring charging handle. The ON/OFF operation of ACB is performed by ON/OFF buttons on the ACB.

● Charging the closing springs

The closing springs are charged manually by pumping the spring charging handle.

● Closing the ACB

Pressing the ON button on the ACB closes the ACB.

● Opening the ACB

Pressing the OFF button on the ACB opens the ACB. The ACB cannot be closed as long as the OFF button is pressed.

● Motor charging type

With motor charging type DH series ACB, the closing springs are charged by a motor. The ON/OFF operation of ACB is performed remotely. The DH series ACB is also equipped with a manual charging mechanism to facilitate inspection.

● Operation power supply

Rated voltage (V)	Applicable voltage range (V)		Operation power supply ratings

110 DC	82-121		6	0.8	0.37
125 DC	93-138		6	0.8	0.31
200 DC	150-220		4	0.5	0.19
220 DC	165-242		4	0.5	0.18

Note: *1 For the ratings of the shunt trip device, see page 06/177.

and maintenance work. The electronized control circuit promises optimum control to the charging of the closing spring and ACB ON/OFF operation.

● Charging the closing springs

The closing springs are automatically charged by a motor. When the closing springs are released with the ACB turned on, they are automatically charged again by the motor in preparation for the next ON operation.

● Closing the ACB

Turn on the remote ON switch to close the ACB. As the anti-pumping mechanism is equipped, even if the ON switch is turned on continuously, the ACB's closing operation is performed only once. When the ACB has to be closed again, turn off the ON switch to reset the anti-pumping mechanism, turn on the ON switch after the closing springs charge completed. If the ON and OFF signals are simultaneously given to the ACB, the ON signals are ignored.

● Opening the ACB

To open the ACB remotely, use the shunt trip device (see page 06/177), or the undervoltage trip device (see page 06/178).

● Step-down transformer (separately installed)

The maximum rated voltage applicable to the operation power supply is 240V AC. If higher voltage has to be applied, a step-down transformer is needed.

The following step-down transformers are available as options.

Rated control voltage	Transformer		
	Type	Capacity	Voltage ratio
410-470V AC	TSE-30M	300VA	450/220V
350-395V AC	TSE-30M	300VA	380/220V

■ Tripping devices

• Continuous rating shunt trip device

The continuous-rating shunt trip device allows the ACB to be opened when an external protection relay against overcurrent or reverse power is activated.

Because of its continuous rating, the device can also be used to provide an electrical interlock to the ACB.

When an AGR-11 OCR is fitted or no OCR is fitted, continuous rating shunt trip and undervoltage trip can not be fitted to the same ACB.

• Capacitor trip device

In using with the continuous rating shunt trip device, the capacitor trip device can be used to trip the ACB within a limited period of 30 sec if large voltage drop occurs due to an power (AC) failure or short-circuit.

The rated voltage of the voltage extractor must be 48 V DC. When the continuous rating shunt trip device is used with capacitor trip device, "NO" contact of auxiliary switch of ACB should be connected in series, otherwise, the internal damage may occur.

Operation check using test jumper is not allowed.

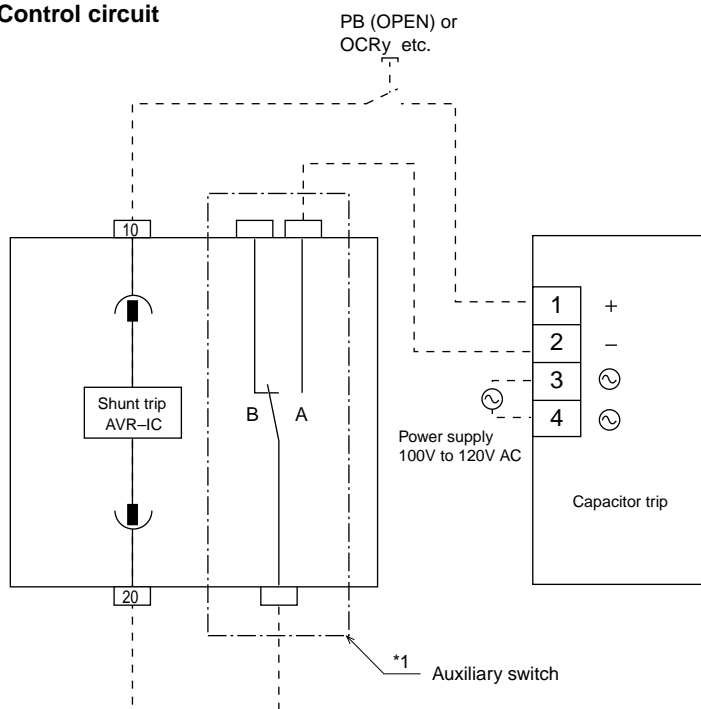

Shunt trip rating (Continuous rating type)

Type	Rated voltage (V)	Operational voltage (V)	Peak excitation current (A)	Normal current (A)	Opening time (max.) (ms)
	100 AC	70–110 AC	0.48	0.32	
	110 AC	77–121 AC	0.39	0.26	
	120 AC	84–132 AC	0.37	0.24	
	200 AC	140–220 AC	0.24	0.16	
	220 AC	154–242 AC	0.19	0.13	
	240 AC	168–264 AC	0.18	0.12	
AVR-1C	24 DC	16.8–26.4 DC	1.65	1.1	40
	48 DC	33.6–52.8 DC	0.86	0.57	
	100 DC	70–110 DC	0.39	0.26	
	110 DC	77–121 DC	0.37	0.25	
	125 DC	87.5–137.5 DC	0.31	0.21	
	200 DC	140–220 DC	0.19	0.13	
	220 DC	154–242 DC	0.18	0.12	

Capacitor trip rating

Type	AQR-1
Rated voltage	100-120V AC
Operational voltage range	70 to 110% of rated voltage
Rated frequency	50/60Hz
Rated voltage of shunt trip used	48V DC
Power consumption	100VA

Control circuit

Dimensions, mm

Air Circuit Breakers

DH series

• Undervoltage trip device (UVT)

The undervoltage trip device (UVT) trips the ACB when the control voltage drops below the opening voltage. When the control voltage is restored to the pick-up voltage, the ACB can be closed. The pick-up voltage is fixed to 85% of the rated voltage.

The UVT consists of a tripping mechanism and an undervoltage trip control device. The trip control device is available in two types: AUR-ICS and AUR-ICD.

Type AUR-ICS provides an instantaneous trip to the ACB when the control voltage drops below the opening voltage.

Type AUR-ICD provides a delayed trip to the ACB when the control voltage remains below the opening voltage for at least 500 ms.

Adding a pushbutton switch (with normally opened contacts) between terminals 24 and 30 allows the ACB to be tripped remotely.

The undervoltage trip device is built in the ACB unit.

AC undervoltage trip control circuit

*1 Tripping signal is 48 VDC/5 mA.
Apply tripping signal for at least 80 ms.

Undervoltage trip Ratings

Type of UVT Control Device	Rated Voltage 50/60Hz (V)	Opening Voltage (V)	Pick-up Voltage (V)	Coil Excitation Current (A)	Power Consumption (VA)	
					Normal	Reset
AUR-1CS	100 AC	35 – 70	85			
AUR-1CD	110 AC	38.5 – 77	93.5			
	120 AC	42 – 84	102			
	200 AC	70 – 140	170			
	220 AC	77 – 154	187			
	240 AC	84 – 168	204	0.1	8	10
	380 AC	133 – 266	323			
	415 AC	145 – 290	352			
	440 AC	154 – 308	374			
	24 DC *	8.4 – 16.8	20.4			
	48 DC *	16.8 – 33.6	40.8			
	100 DC *	35 – 70	85			

*Available soon. Contact Fuji for the details.

■ **Overcurrent trip device (OCR)**

The AGR series of overcurrent trip device (OCR) featuring high reliability and multiple protection capabilities is available for DH series. Controlled by an internal 8-bit microprocessor, the OCR provides reliable protection against overcurrent. The OCR range is divided into three groups: L-characteristic, R-characteristic (both for general feeder) and S-characteristic (for generator protection).

Each group consists of:

- Type AGR-11B : Standard OCR with adjustment dial
- Type AGR-21B, 22B : Standard OCR with L.C.D.
- Type AGR-31B : Enhanced OCR with backlit L.C.D.

Optional protection functions of the OCR include those against ground fault, earth leakage, undervoltage and reverse power. Pre-trip alarm function can also be installed.

• **Types of tripping functions**

1. Adjustable long time-delay trip function (LT)

Effective value (RMS) detection used to accurately read through distorted waveforms.

In addition to the standard L and S-characteristics, the R-characteristic is available in five types for long time-delay trip. The R-characteristic can be used to give selective tripping coordination with e.g., fuses. (See page 06/170.)

Hot-start mode (applicable to L-characteristic of AGR-21B, 31B)

In the hot-start mode, when overcurrent occurs in a load state, the circuit breaker operates in a shorter amount of time as compared with operation in the cold-start mode. The hot-start mode is suitable to protect motors and wires from thermal damage. The cold-start is set at factory default.

2. Adjustable short time-delay trip function (ST)

Ramp characteristic has been provided in addition to definite time-delay trip characteristic. The ramp characteristic gives coordinative protection with downstream circuit breakers or fuses properly. In type AGR-L and AGR-R OCRs, the definite time characteristic is activated when the load current is 1000% or more of the rated current [In] (500% or more of the rated current [In] for AGR-S). The definite time-delay trip characteristic and ramp characteristic are selectable with a switch. The ST trip function is set to the definite time-delay trip characteristic at factory shipment.

Ramp characteristic curve
(L or R-characteristic)

3. Adjustable instantaneous trip function (INST/MCR)

The INST trip function trips the ACB when the short circuit current exceeds the pickup current setting, irrespective of the state of the ACB.

The making current release (MCR) trips the ACB when the short circuit current exceeds the pickup current setting during closing operation. After the ACB is closed, the MCR is locked and kept inoperative.

The INST and MCR are switch-selectable for AGR-21B, 22B and 31B. (AGR-11B is INST only, MCR is not selectable.)

Note) The MCR needs the control power. If the control power is lost, the MCR provides the INST trip function only.

4. Adjustable pre-trip alarm (PTA)

The pre-trip alarm function provides an alarm signal via the alarm contact (1NO-contact) when the load current exceeding a predetermined value lasts for a predetermined time. A 2-channel pre-trip alarm function is available for S-characteristic. This function can be used to adjust feeding to loads according to their priority.

The pre-trip alarm is automatically reset when the load current drops to the predetermined value.

Note that this function needs the control power.

Air Circuit Breakers

DH series

5. Ground fault trip function (GF)

The peak value sensing is used (the residual current of each phase is detected).
The GF pickup current can be set between 10% and 100% of the CT rated primary current [I_{CT}].

<Ramp characteristic is added>

The ramp and definite time characteristics are switch selectable. The GF trip function comes into operation with the definite time characteristic when the load current reaches 100% or more of the CT rated primary current [I_{CT}]. The GF trip function is factory set to the definite time characteristic.

When using a 3-pole ACB in a 3-phase, 4-wire system, be sure to use an optional CT for neutral line. (See page 06/196.)

Note 1: The GF trip function comes usually with operation indications (LED and contact output). If you need nothing but ground fault indication without a ground fault tripping operation, specify at the time of ordering.

Note 2: Restricted and unrestricted ground fault protection REF is available as option. This enables to protect against ground fault on the line side of ACB.

6. Reverse power trip function (RPT)

(For AGR-22B and AGR-31B only)

The RPT function protects 3-phase generators running in parallel against reverse power. The RPT pickup current can be set in seven levels: 4% through 10% of the generator rated power.

If the rated main circuit voltage exceeds 250 VAC, a step-down power transformer is needed. When ordering the ACB, state the step-down ratio of the transformer you will use.

7. N-phase protection function (NP)

This NP function is available on 4-pole ACBs and prevents the neutral conductor from suffering damage or burnout due to overcurrent.

The NP trip pickup current can be set between 40% and 100% of the OCR rated primary current for L and R-characteristics or of the generator rated current for S-characteristic.

It is factory set to a value specified at the time of ordering.

Note 1: The NP trip function comes usually with operation indications (LED and contact output). The NP trip pickup current setting is shared by the LT trip function.

Note 2: The HOT start mode is available for AGR-21B and AGR-31B. The operating time for the NP trip function is linked to that for the LT trip function.

8. Undervoltage alarm function (UV)

(For AGR-22B and AGR-31B only)

This function monitors the main circuit voltage, and gives an alarm on the LCD and an output signal via an alarm contacts when the voltage drops below the setting voltage.

The alarm is activated when the main circuit voltage drops below the setting voltage (selectable from 40%, 60% or 80% of the rated main circuit voltage [V_n]), and is deactivated when the main circuit voltage rises to the recovery setting voltage (selectable from 80%, 85%, 90% or 95% of the rated main circuit voltage [V_n]).

If the rated main circuit voltage exceeds 250 VAC, a step-down power transformer is needed. When ordering the ACB, state the step-down ratio of the transformer you will use.

Note 1: The undervoltage alarm function is disabled unless the main circuit voltage has once risen to the recovery setting voltage or higher.

Note 2: If the undervoltage alarm function is used in conjunction with the undervoltage trip device (see page 06/178), an alarm may occur after the ACB trips open depending on the alarm setting voltage.

9. Contact temperature monitoring function (OH)

(For AGR-31B only.)

The HEAT function prevents the ACB from suffering damage due to overheat.

It monitors the temperature of the ACB main contacts, and gives an alarm on the LCD and an output signal via the alarm contact (1NO-contact) when the temperature exceeds 155°C. The alarm can be manually reset when the temperature drops to a normal temperature.

If you want to set the threshold temperature to a lower value, contact Fuji.

This function needs the control power.

Note 1: "Alarm" or "Trip" can be selected.

10. Reverse phase protection function (NS)

(For AGR-21B and AGR-31B only)

This function detects the negative-phase current occurring due to reverse phase or phase loss and prevents burnout of a motor or damage to equipment. The protection setpoint ranges from 20% to 100% of the main circuit rated current [I_n].

11. Zone interlock (Z)

(For AGR-22B and AGR-31B only)

The zone-selective interlock capability permits tripping of the ACB upstream of and nearest to a fault point in the shortest operating time, irrespective of the short time delay trip time setting, and minimizes thermal and mechanical damage to the power distribution line.

• NON setting and fail-safe feature

1. NON setting

Setting a trip pickup current setting dial to the NON position allows you to render the corresponding protection function inoperative.

Dials having the NON position include LT, ST, INST/MCR, and GF.

Appropriate NON setting will be a useful means for optimum selectivity.

2. Fail-safe feature

The OCR has a fail-safe mechanism in case setting dials are improperly set to the NON position.

- If the ST and INST trip pickup current setting dials are both set to NON, the fail-safe mechanism will activate the INST trip function to trip the ACB when a fault current equal to or more than 16 times the rated current [I_n] flows through the ACB.
- If the ST and MCR trip pickup current setting dials are both set to NON, the fail safe mechanism will activate the ST delay trip function to trip the ACB when a fault current equal to or more than 10 times (5 times for generator protection) the rated current [I_n] flows through the ACB.

• Field test or facility

Type AGR-21B/22B/31B OCRs are equipped with a field test function to verify the long time delay, short time delay, instantaneous and ground fault trip features without the need for tripping of the ACB.

To check type AGR-11B, use the type ANU-1 OCR checker (optional).

● **Operation indication function**

1. Indication via single contact (AGR-11B)

When the LT, ST, INST/MCR, or GF trip function is activated, an output is generated via 1NO-contact.

The 1NO-contact will turn off after 40ms or more.

A self-hold circuit is needed.

2. Indication via individual contacts (AGR-21B, 22B, 31B)

When the LT trip, ST trip, INST/MCR trip, GF trip, RPT, NS, REF, UVT, pre-trip alarm, or contact temperature monitoring function is activated, LCD will indicate their operation individually and output is generated via the corresponding contact.

The OCR also has a self-diagnostic feature that monitors the internal tripping circuits. If detecting any fault in the circuits, this feature turns on the system alarm indicator. The control power is needed.

Operation indications

○: Self-hold (Note 1)

×: Auto-reset

△: status indication

—: Not applicable

Protective characteristic Function	L/R-characteristic	
	LCD	Contact
LTENP	○	○
ST	○	○ (Note 4)
INST/MCR	○	
GF (Ground fault)	○	○
OH (Contact temperature monitoring)	○	○
(Note 2) NS (Reverse phase)	○	○
REF (Line side GF)	○	○
Trip indication *1	△	△
RPT (Reverse power trip)	—	—
PTA (Pretrip alarm)	×	×
PTA2 (Pretrip alarm)	×	×
(Note 3) UV (Undervoltage alarm)	○	△
Spring charge indication	△	△
System alarm	○	○

Note 1: To reset the operation indication, press the button on the OCR.

Note 2: Only one function can be selected from OH, NS, REF or trip indication. Selection of two or more functions involves manual connection of their control circuits (custom configuration). Contact Fuji for details.

Note 3: Only one function can be selected from PTA2, UV or spring charge indication. Selection of two or more functions involves manual connection of their control circuits (custom configuration). Contact Fuji for details.

Note 4: Motion indication contacts are commonly used for ST and INST/MCR.

*1: A switch is used to indicate the ACB has been tripped. This switch is activated whenever the off button of the overcurrent trip device, shunt drip device or undervoltage trip device is pressed.

3. Contact ratings

3-1. Contact ratings of Trip indicator and Spring change indicator

Voltage (V)	Switch contact ratings (A)	
	Resistive load	Inductive load

	●	—	—	○	—	○	—	●	○	○	○	●	Required

Note: • When AGR-11B OCR with single-contact indication is activated, the corresponding operation LED indicator is momentarily ON or OFF. But the LED indicator is kept ON when the protection function is checked with the optional OCR checker.
• If the control power is not supplied or is lost, each function operates as follows:

LT, ST, INST, RPT	Operates normally.
GF	Operates normally. When the CT rated primary current [I _{CT}] is less than 800 A and the GF pick-up current is set to 10 %, the GF becomes inoperative.
MCR	Operates as INST.
PTA 1-channel	Is inoperative.
LED indicator on OCRs with single-contact indication	Is momentarily on or off.
Contact output from OCRs with single-contact indication	Turns off after 40 ms or more.
Contact output from OCRs with individual contact indication	Is inoperative.
LCD	No display
Field test facility	Is inoperative.

Button symbols and their meanings

- Ⓢ : Press the SET button using a pointed tool such as the tip of a pen.
- Ⓜ : Press the MENU button.
- ⬆ : Press the up key of the cross button.
- ⬇ : Press the down key of the cross button.
- ⬆ : Press the right key of the cross button.
- ⬅ : Press the left key of the cross button.
- ⓔ : Press the ENT button.

• AGR-31BL-PG OCR

1. Button symbols and their meanings

Same as above.

2. Monitoring various data on L.C.D.

OCR can monitor,

- Phase current (A) of I₁, I₂, I₃ and their max. peak current
- Current (A) of I_N, I_g
- Line voltage (V) of V₁₂, V₂₃, V₃₁ and their max. peak voltage (or, Phase voltage (V) of V_{1N}, V_{2N}, V_{3N} and their peak voltage)
- Active power max. (kW)
- Demand active power max. (kW)
- Power factor (cos φ)
- Electric energy (kWh/ MWh/ GWh)
- Frequency (Hz)
- Trip history

Fault current is monitored, and the operation cause is indicated on LCD and via individual contacts.

Note : The supply voltage to the OCR for indicating the main circuit voltage or power must not exceed 250 VAC. If the main circuit voltage exceeds 250 VAC, a step-down power transformer is needed. When ordering the ACB, state the step-down ratio of the transformer you will use.

3. Gives the system alarm with number on the LCD for the following abnormal function.

- Trip function fail
- MHT circuit break

Air Circuit Breakers DH series

Protection characteristics

The ST trip characteristic shown in the figure applies when the ramp characteristic select switch is in the OFF position.

■ Characteristics of overcurrent trip device

For general feeder circuit/R-characteristic (Type AGR-21BR, 31BR)

Protection function		Setting range * ___ : Default setting
Adjustable long time delay trip LT	Pick-up current I_R (A)	Select one from among $I^{002}T$, IT , I^2T , I^3T , and I^4T by LCD. $I_R \times (0.8 - 0.85 - 0.9 - 0.95 - \underline{1.0} - \text{NON})$, 6 steps • Non-tripping at $I_R \times 1.05$ or less • Tripping between over $1.05I_R$ and $1.2I_R$ or less
	Time delay t_R (s) Tolerance of t_R (%)	$(1 - 2 - 3 - 4 - \underline{5} - 6.3 - 6.8 - 10)$ at $300\% \times I_R$, 8 steps $\pm 20\% +150\text{ms} -0\text{ms}$
Adjustable short time delay trip ST	Pick-up current I_{sd} (A) Tolerance of I_{sd} (%)	$I_R \times (1 - 1.5 - 2 - 2.5 - 3 - 4 - \underline{6} - 8 - 10 - \text{NON})$, 10 steps $\pm 15\%$
	Time delay t_{sd} (ms) Relay time (ms) Resettable time (ms) Total fault clearing time (ms)	50 100 200 <u>400</u> 600 800, 6 steps 25 75 175 <u>375</u> 575 775 120 170 270 470 670 870
Adjustable instantaneous trip INST or MCR	Pick-up current I_i (A) Tolerance of I_i (%)	$I_R \times (2 - 4 - 6 - 8 - 10 - 12 - 14 - \underline{16} - \text{NON})$, 9 steps $\pm 20\%$
Adjustable pre-trip alarm PTA	Pick-up current I_{P1} (A) Tolerance of I_{P1} (%) Time delay t_{P1} (s) Tolerance of t_{P1} (%)	$I_R \times (0.75 - 0.8 - 0.85 - 0.9 - \underline{0.95} - 1.0)$, 6 steps $\pm 7.5\%$ $(5 - 10 - 15 - 20 - 40 - 60 - 80 - \underline{120} - 160 - 200)$ at I_{P1} or more, 10 steps $\pm 15\% +100\text{ms} -0\text{ms}$
Adjustable ground fault trip GF	Pick-up current I_g (A) Tolerance of I_g (%)	$I_{CT} \times (0.1 - \underline{0.2} - 0.3 - 0.4 - 0.6 - 0.8 - 1.0 - \text{NON})$, 8 steps $\pm 20\%$
	Time delay t_g (ms) Relay time (ms) Resettable time (ms) Total fault clearing time (ms)	100 200 <u>300</u> 500 1000 2000, 6 steps 75 175 275 475 975 1975 170 270 370 570 1070 2070
Ground fault trip on line side REF	Pick-up current $[I_{REF}]$ (A) Current setting tolerance (%) Time-delay (s)	$[I_{CT}] \times (0.1 - \underline{0.2} - 0.3 - 0.4 - 0.6 - 0.8 - 1.0 - \text{NON})$, 8 steps $\pm 20\%$ Inst
Neutral phase protection function NP	Pick-up current I_N (A)	$I_{CT} \times (\underline{0.4} - 0.5 - 0.63 - 0.8 - 1.0)$ Factory set to a user-specified value • Non-tripping at $1.05 I_N$ or less • Tripping between over $1.05I_N$ and $1.2I_N$ or less
	Time delay t_N (s) Tolerance of t_N (%)	Long time delay (LT) trip at 300% of I_N $\pm 20\% +150\text{ms} -0\text{ms}$
Reverse phase protection NS	Pick-up current $[I_{NS}]$ (A) Current setting tolerance (%) Time-delay $[t_{NS}]$ (s) Time-delay tolerance (%)	$[I_N] \times (0.2 - 0.3 - \underline{0.4} - 0.5 - 0.6 - 0.7 - 0.8 - 0.9 - 1.0)$, 9 steps $\pm 10\%$ At 150% current of $[I_{NS}]$, $0.4 - 0.8 - 1.2 - 1.6 - 2 - 2.4 - 2.8 - 3.2 - 3.6 - \underline{4}$, 10 steps $\pm 20\% +150\text{ms} -0\text{ms}$
Undervoltage alarm UV (AGR-31B only)	Recovery setting voltage (V) Recovery voltage tolerance (%)	$[V_n] \times (0.8 - \underline{0.85} - 0.9 - 0.95)$, 4 steps $\pm 5\%$
	Setting voltage (V) Setting voltage tolerance (%) Time delay (s) Time delay tolerance (%)	$[V_n] \times (0.4 - \underline{0.6} - 0.8)$, 3 steps $\pm 5\%$ $0.1 - 0.5 - \underline{1} - 2 - 5 - 10 - 15 - 20 - 30 - 36$, 10 steps $\pm 5\% +100\text{ms} -0\text{ms}$
Control power		100 to 120V AC) common 100 to 125V DC) common 24V DC) common 200 to 240V AC) common 200 to 250V DC) common 48V DC) common

Protection characteristics

The ST trip characteristic shown in the figure applies when the ramp characteristic select switch is in the OFF position.

Air Circuit Breakers

DH series

■ Supplied accessories

• ON-OFF operation counter

The ON-OFF operation counter is a mechanical 5-digit readout that shows the number of ON-OFF operations of the ACB.

Counter readings serve as a guide for maintenance or inspection.

• Auxiliary switches

The 7PDT auxiliary switches operate during the ACB ON/OFF operation.

Connections to the switches are made via screw terminals. The auxiliary switches for draw-out type ACBs operate in the CONNECTED and TEST positions.

The auxiliary switches for ACBs conforming to marine use rules which operate in the CONNECTED position only.

Auxiliary switch ratings

Category	For general use		
	Resistive load (A)	Inductive load (A)	AC: $\cos \phi \geq 0.3$ DC: $L/R \leq 0.01$
100-250V AC	5		5
251-500V AC	5		5
30V DC	1		1
125-250V DC	1		1

Notes *1: The chattering of NC-contacts due to ON/OFF operation of the ACB should be less than 20 ms.

*2: Do not supply different voltages to contacts of a switch.

• Position padlock lever

Using the position padlock lever prevents the breaker body from inadvertently being drawn out. The position padlock lever in the pulled-out position locks the breaker body in the CONNECTED, TEST, or ISOLATED position. Up to three padlocks (with 6mm dia. hasp) can be installed.

• ON-OFF button cover

An ON-OFF button cover (supplied as standard) prevents inadvertent or unauthorized operation of the ON or OFF button. It can be locked with up to three padlocks with 6mm dia. hasp.

Padlocks are not supplied.

• Draw-out handle

■ Optional accessories

• Auxiliary switches

The auxiliary switches operate during the ACB ON/OFF operation.

Connections to the switches are made via screw terminals.

The auxiliary switches for draw-out type ACBs operate in the CONNECTED and TEST positions.

The auxiliary switches for ACBs conforming to marine classification society's rules operate in the CONNECTED position only.

The auxiliary switches are available for general use and for microload.

Auxiliary switch arrangement

For general use	For microload
4PDT	—
4PDT	3PDT
10PDT	—
7PDT	3PDT

Auxiliary switch ratings

Voltage	For general use			For microload			Min. applicable load
	Resistive load (A)	Inductive load (A)	AC: $\cos \phi \geq 0.3$ DC: L/R ≤ 0.01	Resistive load (A)	Inductive load (A)	AC: $\cos \phi \geq 0.6$ DC: L/R ≤ 0.007	
100-250V AC	5	5	5	0.1	0.1	0.1	5V DC 1mA
251-500V AC	5	5	5	—	—	—	
30V DC	1	1	1	0.1	0.1	0.1	
125-250V DC	1	1	1	—	—	—	

Notes 1: The chattering of NC-contacts due to ON-OFF operation of the ACB should be less than 20 ms.

Notes 2: Do not supply different voltages to contacts of a switch.

● Key lock

There are two types of keylock: "Lock-in-OFF type" which prevents the breaker from being CLOSED and "Lock-in-ON type" prevents it from being OPENED.

When the ACB is fitted with a key lock, the operator cannot operate the ACB unless using a matched key.

- A key must be inserted to release the lock before the ACB can be closed.

- The ACB must be opened and locked in the OFF position before the key can be removed.

By utilizing the lock-in OFF type key lock feature, and then a limited number of keys by default provides an effective and reliable interlock system.

Using the same keys also allows interlocking between an ACB and other devices (such as a switchboard door).

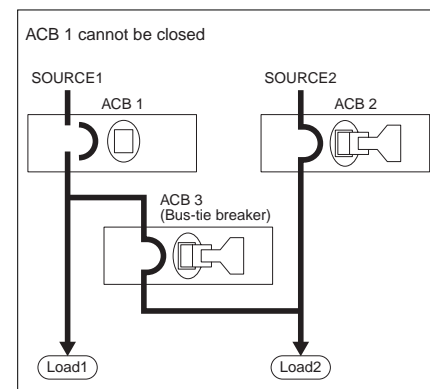

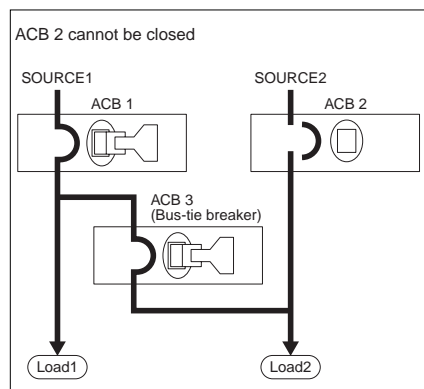

ACBs are supplied with a cylinder lock or with a provision for type FS-2 Castell lock (with angular movement 90° clockwise to trap key).

The Castell lock is not supplied.

● Key interlock

The key interlock is a system of interlocking between ACBs, each fitted with a key lock of lock-in OFF type.

Example: Interlock for prevention of parallel feeding of two power supplies when a bus-tie breaker is used.

Air Circuit Breakers

DH series

■ Optional accessories

• Mechanical interlock

Mechanical interlocks for interlocking 2 or 3 ACBs in either horizontal (Draw-out type and fixed type) or vertical (Draw-out type only) arrangements are available.

Interlocking is possible between any frame size of DH series ACB.

In conjunction with an electrical interlock, it will enhance safety and reliability of power distribution systems.

1. Horizontal type

This table shows the standard pitch between left side ACB A and right side ACB B, or between left side ACB B and right side ACB C.

Left ACB		Right ACB	Pitch of ACB P (mm) (PC line to PC line)			
			DH08 to DH20 DH12H to DH20H	DH25 to DH30 DH16P to DH30P	DH40	DH50 DH60
			3P, 4P	3P, 4P	3P, 4P	3P, 4P

DH25 to DH30	3P		800, 900, 1000, 1100	900, 1000, 1100	800, 900, 1000	1100, 1200, 1300
	4P		1000, 1100, 1200, 1300	1000, 1100, 1200	1000, 1100, 1200	1300, 1400
DH16P to DH30P	3P		700, 800, 900, 1000	800, 900, 1000	700, 800, 900, 1000	1000, 1100, 1200
	4P		1000, 1100, 1200	1000, 1100, 1200	1000, 1100, 1200	1200, 1300, 1400

When ordering, select the required pitch for P1 and P2 from the above table, and specify the type and number of poles for ACB A, ACB B, and ACB C if exists.

2. Vertical type

Minimum pitch (550mm) is possible.

Specify the required pitch when ordering.

Maximum is 1200mm.

Contact FUJI for the details of vertical type with 3 ACBs.

• Control circuit terminal cover

A control circuit terminal cover protects the terminal blocks for auxiliary switches, position switches, and control circuits from being accidentally touched, thus enhancing safety.

• Automatic closing spring release

This device allows the charged closing springs to be automatically released when the ACB is drawn out from the ISOLATED position to the DRAW-OUT position.

ANSI or NEMA-compliant ACBs require this option.

• Spring charge indicator

This switch can be used to indicate that the closing springs have been fully charged.

For the contact ratings of the switch, see the table 3-1 on page 06/181.

■ Optional accessories

• Door flange

A door flange can be used as a decoration panel that covers the cutout on the switchboard panel, and provides IP20 protection. For IP31 protection, please specify the door flange with a gasket.

Note: Door flange cannot be specified with door interlock.

*: Mount IP20 door flange through 6 mounting holes and IP31 door flange through 10 mounting holes.

• OFF padlock

Permits the ACB to be padlocked in the OFF position. Max. three padlocks with 6mm dia. hasp can be fitted. Padlocking is possible only when ON-OFF indicator shows OFF. When the ACB is padlocked in the OFF position, both manual and electrical closing become inoperative, but the charging of the closing spring by manual or motor is still possible.

Note: OFF padlock facility cannot be fitted with key lock or key interlock.

• Interface barrier

An interface barrier prevents a possible short-circuit due to foreign objects entering between the poles of the main circuit terminals or between the line and load ends, thus enhancing operational reliability of the ACB.

This barrier cannot be applied to ACBs that are supplied with front connections or a reverse power trip function.

• Earthing device

There is a growing demand in L.V. distribution for greater protection against electric shock particularly during periods when maintenance work is being carried out on the main busbars or cables. A safe and economical way to meet this requirement is to apply system earthing via the normal service breaker. Earthing devices on FUJI ACBs comprises; permanent parts which are factory fitted by FUJI and are mounted on the ACB chassis and body to enable the ACB to receive the portable parts. Portable parts are supplied in loose kit form and are fitted on to the ACB body by the

customer's engineer. This converts the ACB from a normal service device to an earthing device.

When the ACB is converted to the earthing device mode, the over current release and the other electrical tripping devices are automatically disabled to prevent the remote opening of the ACB.

It is recommended that the ON-OFF operating buttons be padlocked to prevent manual opening of the ACB when used in the earthing mode.

UVT function cannot be applied to the earthing device.

Air Circuit Breakers

DH series

■ Optional accessories

• IP cover

An IP cover provides an IP55 grade of protection as required in IEC 60529. Even if the breaker body is on the ISOLATED position, IP cover can still be fitted on the ACB.

• OCR checker, type ANU-1

The OCR checker allows easy checking of the long time-delay trip, short time-delay trip, instantaneous trip, ground fault trip functions and the pre-trip alarm function of the OCR in the field.

Ratings and specifications

Power supply • 100–110V AC, 50/60Hz
or
100–240V AC, 50/60Hz
with type C plug
• 4 x AA alkaline cells

Power consumption	7VA
Dimensions	101 (W) x 195 (H) x 44 (D) mm
Mass	400 g

• Current transformer for neutral line (separately installed)

When using a 3-pole ACB with the ground fault protection function to protect a 3-phase, 4-wire system against ground fault, install an appropriate current transformer (CT) to the neutral line of the system. FUJI can provide this neutral line CT as an option. For the 4-pole ACB, a measuring CT instead of the neutral line CT is already built into the ACB with ground fault protection function.

Dimensions, mm

CW80-40LS

DH08, DH12, DH16
DH12H, DH16H, DH16P

Type	Rated primary current
CW80-40LS	200, 400, 800, 1250, 1600

Rated secondary current is 5A.

EC160-40LS

DH20, DH25, DH30, DH40, DH50, DH60
DH20H, DH20P, DH25P, DH30P

Type	Rated primary current
EC160-40LS	1600, 2000, 2500, 3200, 4000, 5000, 6300

Rated secondary current is 5A.

■ Optional accessories (for draw-out type)

• Main circuit safety shutters

The main circuit safety shutters automatically conceal the main circuit contacts on the draw-out cradle when the ACB is drawn out.

- The top and bottom shutters operate independently and can be separately padlocked in the closed position.
- Up to three padlocks (with 6mm dia. hasp) can be installed on each side using padlocking unit. (Padlock not supplied)
- In the closed position, the shutters are locked to the extent that they cannot be easily unlocked by hand. They can be unlocked and held open if required for the purpose of inspection or maintenance.

• Control circuit safety shutter

The control circuit safety shutter covers the control circuit contacts, ensuring safety.

• Breaker fixing bolts

The breaker fixing bolts hold the breaker body securely to the draw-out cradle in position. Use them if the ACB is subject to strong vibration.

• Test jumper

The test jumper is a plug-in type, and allows ON-OFF tests on all the DH series ACBs with the breaker body drawn out from the draw-out cradle. The standard jumper cable is 5m long.

• Mal-insertion prevention device

Interchangeability exists within the DH series ACBs. Because of this feature, there is a possibility for an ACB of a different specification being placed into the draw-out cradle. Using the mal-insertion prevention device eliminates such a possibility.

This device is capable of distinguishing nine different breaker bodies.

• Lifter

A special lifter is available to allow easy and safe transportation or installation of the ACB. A drop prevention mechanism is standard.

ACB mounting position

*: If 190 mm is exceeded, contact FUJI.

• Lifting plate

Lifting plates are detachable tools that can be used to lift a breaker body out of a draw-out cradle.

Type of Lifter	Mass (kg)	W (mm)	Applicable ACBs
AWR-1F	110	700	800 to 3200A
AWR-2F	120	890	800 to 4000A

Air Circuit Breakers

DH series

■ Optional accessories (for draw-out type)

• Position switches

The position switches operate to give indication of breaker positions: CONNECTED, TEST, ISOLATED, and INSERT. There are two contact arrangements: 2PDT and 4PDT.

Type	Number of contacts	Contact arrangement			
		INSERT	ISOLATED	TEST	CONN
ALR-0110P	2PDT	0	1	1	0
ALR-0101P		0	1	0	1
ALR-0011P		0	0	1	1
ALR-0200P		0	2	0	0

ALR-0103P		0	1	0	3
ALR-0013P		0	0	1	3
ALR-0040P		0	0	4	0
ALR-0004P	0	0	0	4	

• Door interlock

The door interlock prevents the switchboard door from being opened unless the breaker body is in the ISOLATED position. When the draw-out handle is removed while the ACB is in the ISOLATED position, the interlock is released and the switchboard door can be opened.

The breaker body cannot be inserted unless the switchboard door is closed.

Contact FUJI for details.

• Step-down transformer

See page 06/176.

• Capacitor trip device

See page 06/177.

• Undervoltage trip device

See page 06/178.

Connections to the switches are made via tab or screw type terminals.

The following table lists the available types of the switches.

Position switch operation sequence

The INSERT position means the breaker body is in a position between ISOLATED and CONNECTED.

Position switch ratings

Voltage	Resistive load (A)	Inductive load (A) ($\text{COS } \varnothing \geq 0.6, L/R \leq 0.007$)
100-250V AC	11	6
250V DC	0.3	0.3
125V DC	0.6	0.6
30V DC	6	5
8V DC	10	6

Note 1: When a Door interlock is specified, a storage draw-out handle is supplied.

Note 2: Door interlock can not be specified with Door flange.

Note 3: Contact FUJI for the details for fitting Door Interlock with IP55 cover.

Above figures are subject to the design of the enclosure and rating of busbar.
* Contact FUJI for details.

■ Operation Environments and recommendation for busbars connection

• Standard environment

The standard environment for ACBs is as follows:

Ambient temperature	–5°C to +40°C The average temperature for 24 hours must not exceed 35°C.
Relative humidity	45% to 85%
Attitude	Below 2000 m
Atmosphere	Excessive water vapor, oil vapor, smoke, dust, or corrosive gases must not exist. Sudden change in temperature, condensation, or icing must not occur.

• Special environment

Tropicalization (Fungus and moisture treatment)

Specify this treatment when the ACB is used under high-temperature and high-humidity conditions.

Conditions: Max. permissible ambient temperature 60°C
Max. permissible humidity 95% rel.
No condensation

Cold climate treatment

Specify this treatment when the ACB is used in cold areas.

Conditions: Min. permissible storage temperature –40°C
Min. permissible operating temperature –25°C
No condensation

Anti-corrosion treatment

Specify this treatment when the ACB is used in a corrosive atmosphere.

Contact FUJI for details.

■ Recommendation busbars connection

The busbars to the ACB should be firmly supported near the ACB terminal. Fault current flow through the busbars develops a large electromagnetic force between the busbars, and the support must be strong enough to withstand such forces. The ACB should not be relied on as a single support. The busbar support should be made of high quality insulator. Secure sufficient insulation distance (creeping distance above the busbar support, in particular).

The maximum distance of the connection point of ACB to the first busbar support

Short-circuit current (kA)	30	50	65	80	100	120	
Distance

31 32 33 34 35 36 37 38 39 40 41 42 Manual connection

If the ground fault protection is incorporated and a separate current transformer for neutral line is used, or any one of ground fault protection on the line side, zone interlock, external display or communication function is incorporated, control circuit terminals are of manual connection type.

Catalog Disclaimer

The information contained in this catalog does not constitute an express or implied warranty of quality, any warranty of merchantability or fitness for a particular purpose is hereby disclaimed.

Since the user's product information, specific use application, and conditions of use are all outside of Fuji Electric FA Components & Systems' control, **it shall be the responsibility of the user to determine the suitability of any of the products mentioned for the user's application.**

One Year Limited Warranty

The products identified in this catalog shall be sold pursuant to the terms and conditions identified in the "Conditions of Sale" issued by Fuji Electric FA with each order confirmation.

Except to the extent otherwise provided for in the Conditions of Sale issued by Fuji Electric FA, Fuji Electric FA warrants that the Fuji Electric FA products identified in this catalog shall be free from significant defects in materials and workmanship provided the product has not been: 1) repaired or altered by others than Fuji Electric FA; 2) subjected to negligence, accident, misuse, or damage by circumstances beyond Fuji Electric FA's control; 3) improperly operated, maintained or stored; or 4) used in other than normal use or service. This warranty shall apply only to defects appearing within one (1) year from the date of shipment by Fuji Electric FA, and in such case, only if such defects are reported to Fuji Electric FA within thirty (30) days of discovery by purchaser. Such notice should be submitted in writing to Fuji Electric FA at 5-7, Nihonbashi Odemma-cho, Chuo-ku, Tokyo, Japan. The sole and exclusive remedy with respect to the above warranty whether such claim is based on warranty, contract, negligence, strict liability or any other theory, is limited to the repair or replacement of such product or, at Fuji Electric FA's option reimbursement by Fuji Electric FA of the purchase price paid to Fuji Electric FA for the particular product. **Fuji Electric FA does not make any other representations or warranties, whether oral or in writing, expressed or implied, including but not limited to any warranty regarding merchantability or fitness for a particular purpose.** Except as provided in the Conditions of Sale, no agent or representative of Fuji Electric FA is authorized to modify the terms of this warranty in writing or orally.

In no event shall Fuji Electric FA be liable for special, indirect or consequential damages, including but not limited to, loss of use of the product, other equipment, plant and power system which is installed with the product, loss of profits or revenues, cost of capital, or claims against the purchaser or user of the product by its customers resulting from the use of information, recommendations and descriptions contained herein. The purchaser agrees to pass on to its customers and users, in writing at the time inquiries and orders are received by buyer, Fuji Electric FA's warranty as set forth above.

Caution "Safety precautions"

- Operate (keep) in the environment specified in the operating instructions and manual. High temperature, high humidity, condensation, dust, corrosive gases, oil, organic solvents, excessive vibration or shock might cause electric shock, fire, erratic operation or failure.
- Follow the regulations of industrial wastes when the product is to be discarded.
- The products covered in this catalog have not been designed or manufactured for use in equipment or systems which, in the event of failure, can lead to loss of human life.
- If you intend to use the products covered in this catalog for special applications, such as for nuclear energy control, aerospace, medical, or transportation, please consult our Fuji Electric FA agent.
- Be sure to provide protective measures when using the product covered in these catalogs in equipment which, in the event of failure, may lead to loss of human life or other grave results.
- Follow the directions of the operating instructions when mounting the product.
